Abstract

China will focus on the implementation of the next 5 years to expand domestic demand, the establishment of long-term mechanism, the release of the consumption potential. Economic growth will be changed effectively from depending overly on investment and exports to keeping coordination of consumption, investment and exports. Accelerating China's future urban development will be the main engine in the transformation of economic growth, inclusive growth to achieve. This report focuses on Urban: Impel the World Curve and Flat. *Annual Report on China Urban Competitiveness No. 9* enlarged the viewpoint of research, and created new theory of research. In the brief introduction of urban competitiveness method, happiness survey of urban residents is introduced firstly. Quantitative research applied the form of general report and regional reports. Firstly, the general report employed the revealed index system and data to analyze 294 Chinese cities, and then came the regional reports of 6 regions and 22 provinces in China. The theme report is the biggest highlight of the report. It prompts that development plan of regional and urban development, government departments shall take fully it into account that the world is "curve and flat." The executive power to the government must play a part in market failure. While continuing to attach importance to the development of central urban, the edge of cities and regions should be given sufficient policy support; the undeveloped city shall be given the opportunity to take off. Only that can avoid an imbalance in regional development and achieve coordinated development of national unity.
